PROFESSIONAL SUMMARY

Cloud Security Engineer specializing in Microsoft Entra ID, AWS security, identity governance, and Zero Trust architecture. Experienced in securing cloud-native platforms through least-privilege access controls, secrets management, infrastructure hardening, and compliance-aligned cloud deployments. Microsoft-certified across Azure Administration, Identity, Security Operations, and Compliance with a DevOps engineering background that enables secure software delivery without sacrificing velocity.

CERTIFICATIONS

7X Microsoft Certified:

AZ-104(Microsoft Azure Administrator Associate)

SC-200(Microsoft Security Operations Analyst Associate)

SC-300(Microsoft Identity and Access Administrator Associate)

SC-401(Microsoft Information Security Administrator Associate)

SC-500(Microsoft Cloud and AI Security Engineer Associate)

SC-900(Microsoft Security, Compliance, and Identity Fundamentals)

AZ-900(Microsoft Azure Fundamentals)

Kubernetes and Cloud Native Associate (KCNA)

TECHNICAL SKILLS

CLOUD: Azure, AWS

IDENTITY: Microsoft Entra ID, IAM, RBAC, Conditional Access, PIM, Access Reviews, MFA, Zero Trust

SECURITY: Microsoft Defender, Microsoft Sentinel, Cloud Security, Incident Response, Threat Detection, Compliance

INFRASTRUCTURE: Terraform, Bicep, Docker, Kubernetes, Helm, GitHub Actions, HashiCorp Vault

MONITORING: Prometheus, Grafana, CloudWatch, Azure Monitor, Purview

PROGRAMMING: TypeScript, Node.js, JavaScript, Bash, Python

SELECTED PROJECTS

Zero Trust Identity Platform (Personal Azure Portfolio)

- Designed a Zero Trust identity architecture on Microsoft Entra ID, including access governance, group-based provisioning, and conditional access configuration - directly applying SC-300/SC-900 concepts in a hands-on environment.
- **Secure Infrastructure Deployment with Key Vault (Azure/Bicep)** - Built a Bicep-based IaC deployment provisioning Key Vault and storage resources under Zero Trust principles - no hardcoded secrets, access scoped through managed identities and least-privilege RBAC assignments.
- **Zero Trust Network Architecture for Kubernetes (AWS)** - Designed a Zero Trust network segmentation model for a production-grade Amazon EKS cluster, including a multi-tenant Kubernetes controller enforcing workload isolation and least-privilege IAM boundaries between tenants.

PROFESSIONAL EXPERIENCE

Cloud Security Engineer - ParleAfrica *May 2026 – Present*

- Reduced unauthorized access risk across cloud workloads by implementing least-privilege IAM and RBAC governance supporting engineering teams.
- Improved secrets security by centralizing API key and credential management through HashiCorp Vault, eliminating hardcoded secrets from deployment workflows.
- Embedded security controls into infrastructure delivery by partnering with engineering teams on secure cloud architecture reviews.
- Strengthened compliance posture by standardizing identity governance processes across production environments.

Cloud Security Engineer (transitioned from DevOps Engineer) - Greatsome Innovations Nig Ltd *March 2024 – December 2025*

- Transitioned from a DevOps engineering role into a dedicated security function, applying platform-level knowledge to harden identity, access, and infrastructure controls.
- Directed security-conscious engineering practices across a backend engineering team, embedding access governance and secure-by-design principles into delivery workflows.
- Partnered with architecture and product teams to align infrastructure decisions with compliance and risk requirements as the platform scaled.

Infrastructure Engineer - Paysufty *March 2025 – December 2025*

- Designed highly available AWS infrastructure supporting fintech payment services while enforcing security-by-default network and IAM configurations.
- Reduced credential management overhead by implementing centralized Vault-based secret rotation.
- Increased deployment reliability through Infrastructure as Code using Terraform/Bicep.

DevOps Engineer & Developer Advocate - Cuesoft *April 2023 – January 2025*

- Maintained secure, automated CI/CD pipelines (GitHub Actions) across development, staging, and production, with environment segregation reducing the risk of unauthorized production changes.
- Integrated Prometheus-based monitoring into Kubernetes environments to enable early detection of performance anomalies and potential security-relevant incidents.

EDUCATION

Bachelor of Science (B.Sc), Chemistry - University of Ibadan, Nigeria *2019 – 2024*
